IF SOMETHING OCCURS WITH YOUR FOG CANNON™

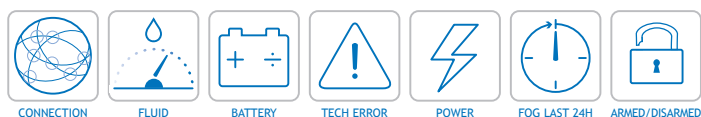

YOU'RE THE FIRST TO KNOW

**PROTECT®** | SECURED IN SECONDS

SAFE MONITORING 24/7 AT NO CHARGE

With IntelliCloud™ you can sleep well at night, knowing that the security fog alarm installation is fully serviced, up to date and ready to protect your valuables.

Our service report system is especially ideal for customers with multiple Fog Cannons™ placed on different addresses. IntelliCloud™ enabled Fog Cannons™ report any incidents from fog activations to low fluid, low battery or any error generated.

| CONNECTION | FLUID | BATTERY | TECH ERROR | POWER | FOG LAST 24H | ARMED/DISARMED |

Notice: IntelliCloud™ requires an IPCard™ in the Fog Cannon™ to be monitored.

When service is required, you receive an e-mail, and your personal and user-friendly dashboard will show a red warning dot.
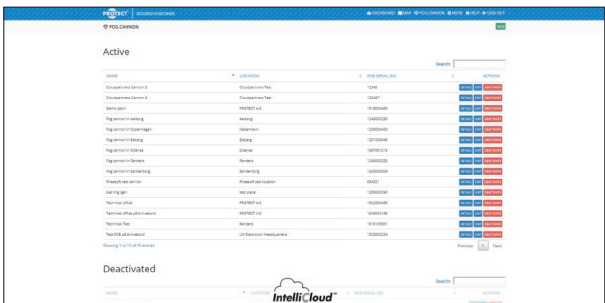

The user-friendly IntelliCloud™ system gives you valuable data that enables you and/or your installer to troubleshoot remotely.

WITH AND WITHOUT INTELLICLOUD™

A large retail chain decided to install PROTECT Fog Cannons® in all their hundreds of stores throughout the whole country. During the rollout, you as the security manager, can view the status and register when each store is commissioned, and when the new security protection is operational.

Error: Ongoing, you can view any error from the Fog Cannons™ and will receive an automated e-mail from IntelliCloud™ with an exact description of the error.

Without IntelliCloud™ you would only know from the monitoring company/control station that a Fog Cannon™ has an error, but it could be any kind of error.

Fog Cannons™ set or unset visible on dashboard. Detailed monitoring of all your Fog Cannons™ especially on large estates is essential to keep cost of servicing and fluid refills down to a minimum.

When the error is fixed, you'll be able to see that the reported error is investigated and fixed, so as not to leave any store vulnerable for any extended period.

At a click you know that your security investment years after is still performing 100%.

Fluid level: You'll get the exact percentage of fog fluid left in each Fog Cannon™. Without IntelliCloud™ the monitoring station would only know, that the machine is indicating "low fluid". With IntelliCloud™ you should only exchange the fluid container when you really have to, thereby saving time and money.

Battery life: The condition of the battery is recorded on all IntelliCloud-enabled Fog Cannons™. This means that you don't have to exchange the batteries each year like without IntelliCloud™, if the batteries are still good. Again, this saves you time and money, and at the same time you make the World's resources last longer.

Over time, IntelliCloud™ can reduce the number of unnecessary service calls, and you know that all Fog Cannons™ are working 100% at any time.

The security manager of this bike shop chain can sleep well at night knowing that the Fog Cannon™ is ready to activate when needed.

MORE ADVANTAGES
WITH INTELLICLOUD™

IntelliCloud™ constantly monitors the status of each installation. This will give you peace of mind.

- You can see when the Fog Cannon™ is armed at night and disarmed during the day
- If a Fog Cannon™ is not armed, you can react quickly to the situation
- You receive an e-mail when service is required, and your personal and user-friendly dashboard will show a red warning dot
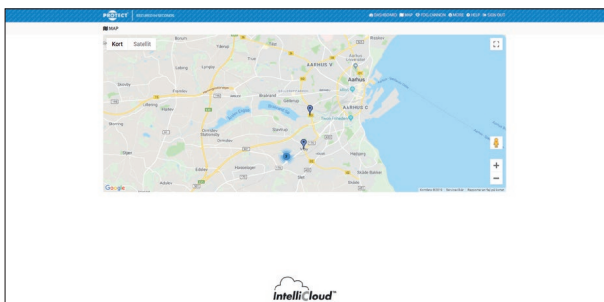

System status overview
From the user-friendly dashboard you get all the essential information about unit locations, fluid levels and technical status.

- You will know about any fault, like e.g. loss of mains power, and can decide to have guards for the night
- If a Fog Cannon™ is not armed, you can react quickly to the situation
  - System status
  - Faults
  - Warnings
  - Fluid in %
  - Battery health condition and voltage
  - Temperature
  - DIP switch settings

Other advantages
- Dashboard is displaying if Fog Cannons™ have discharged
- History log from day of installation
- Fog Cannons™ are visible on an interactive map and as a list
